

Press release / 19.02.2024

Expansion to 2-shift operation at Hänseler AG

Good news from the Herisau economic area. The exceptionally good order situation means that Hänseler AG is increasing its production capacities with immediate effect and is now introducing two-shift operation instead of the previous one-shift operation. "This operational decision is of great importance for Hänseler AG and the Herisau site and is in line with our growth strategy," says Dr. Dominik Hauser, CEO of Hänseler AG in Herisau.

On August 22, 2023, Hänseler AG celebrated the ground-breaking ceremony for the new production building. With this new building, Hänseler Swiss Pharma is investing further in its infrastructure at the Herisau site. This project is intended to further strengthen the company's established position in the Swiss market and also facilitate growth beyond the country's borders. With the "Neubau M" project, Hänseler AG is setting an exclamation mark as a leading Swiss production and trading company in the pharmaceutical and healthcare sector. The "Neubau M" will create space and efficiency, which will enable further jobs to be created at the Herisau site.

By introducing permanent two-shift operation on the liquid filling line, Hänseler AG is able to process customer requests successfully and efficiently. "This will strengthen our competitiveness and continue the successful development we have already initiated. It shows that our range of services is appreciated by customers and that we are on the right track," says CEO Dr. Dominik Hauser.

In this context, Hänseler AG would like to thank all its employees for their exceptionally motivated and outstanding commitment. We would also like to thank all our customers and many other stakeholders who place their trust in Hänseler AG every day and contribute to our successful business performance.

Herisau, February 19, 2024 / MBn
